Ok. get it . Will send the amended label by next week. Thanks

Sue

Sue,

A few more follow up questions from my assessors on the digital photos.

1. Was there any increase in mortality associated with the digital imaging (dead bee traps)?
2. How well did the digital and visual inspections compare?
3. How long did it take for digital vs. visual inspection?

Thanks for calling this morning. The third label we discussed that may need a label amendment was for V-10066 SC Insecticide, Reg. No. 159639-197.

Also, just FYI, we're planning on publishing a final notice on the voluntary cancellation for fruiting veg and low growing berries in June.

Sue,

The short answer is that none of the data in the final report is digital CCA data. It is all visual observation data.

However, at CCA1, on May 20<sup>th</sup>, 20 hives were assessed digitally. These were divided into two groups of ten each.

One group was only assessed by digital photography. These hives had dead bee traps associated with them so that they could be compared to hives for which visual observations were done. None of these hives were used as study hives since there was no visual observations performed on these hives. Rather they were used in the pool of potential hives for use as monitoring hives.

The second group of hives were assessed by digital photography and three visual observers on the same day. These were done to compare the visual observers to each other and to the output of the digital photography. Of these hives, five were used as study hives (J3, J7, K1, K4, L6). The CCA1 data in the report originate from the visual observation data.

Hi, Allen : Have you had a chance to look for the digital photo yet ?

Sue,

Regarding the three identified issues with the number of supers, the Agency is correct in their interpretation. The supers were removed during the CCAs at those times.

For the digital photography question, I will need to look at the study files.

Allen
